4 Directorate-General for Competition

5 European Commission

6

7

8 **New Competition Tool ('NCT'), Ref. Ares(2020)2877634 - 04/06/2020**

9

10

11 First of all, a lot of thanks to Directorate-General for Competition for organising this important  
12 consultation.

13

14 This opinion represents an opinion of an individual citizen, not any legal entity.

15

16 This opinion does not contain:

17 – any business secrets

18 – any trade secrets

19 – any confidential information.

20

21 This opinion is public.

22 PDF file of this opinion can be added to a relevant web page.

23

24 Annex 1 holds information about previous consultations at the European Union level.

25 Annex 2 holds information about copyright, licence and disclaimers.

26

27

28

29 Best Regards,

30

31

40

41

**About previous consultations / Repeating several issues**

43

44 Annex 1 holds information about previous consultations. I have repeated the same issues several  
45 times and previous consultation documents can be assessed critically. Different units of the  
46 European Commission already know something about my previous opinions.

47

**Highlighting only some issues**

49

50 This opinion does not handle all issues which are mentioned on consultation documents. I have  
51 presented different issues to different units of the European Commission. Generally speaking many  
52 proposals are already implemented and therefore I don't present all possible issues based on this  
53 consultation.

54

**Previous consultation: definition of relevant market for the purposes of Community  
competition law**

57

58 Here we can note that this opinion has two parts.

59

60 **Part 1: Repeating certain issues once more**

61

62 **Part 2: Some notices for new competition tool**

63

**PART 1: REPEATING CERTAIN ISSUES ONCE MORE**

64

**Five basic functions for all information technology solutions**

65

66 Generally speaking all information technology solutions have five basic functions:

67

- 70 • retrieve
- 71 • add
- 72 • change
- 73 • remove
- 74 • administration.

75

76 Generally speaking most used function is retrieving information from different systems.

77

**Black box – Information technology solutions**

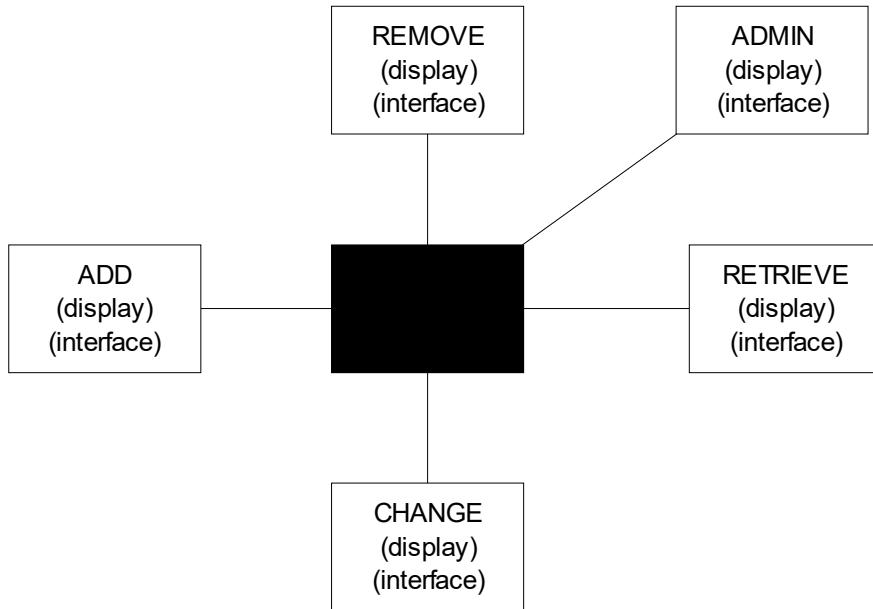

78

79 Usually we are using information systems without knowledge about internal functions – this can be  
80 described as black box solution.

82

83 In many cases four basic functions (add, remove, change, retrieve) are working well without  
84 problems (black box).

85

86

87

88 Here we can note that providers of different information technology can read data of some  
 89 information technology solutions. Providers of different information technology solutions can also  
 90 develop programs and machinery.

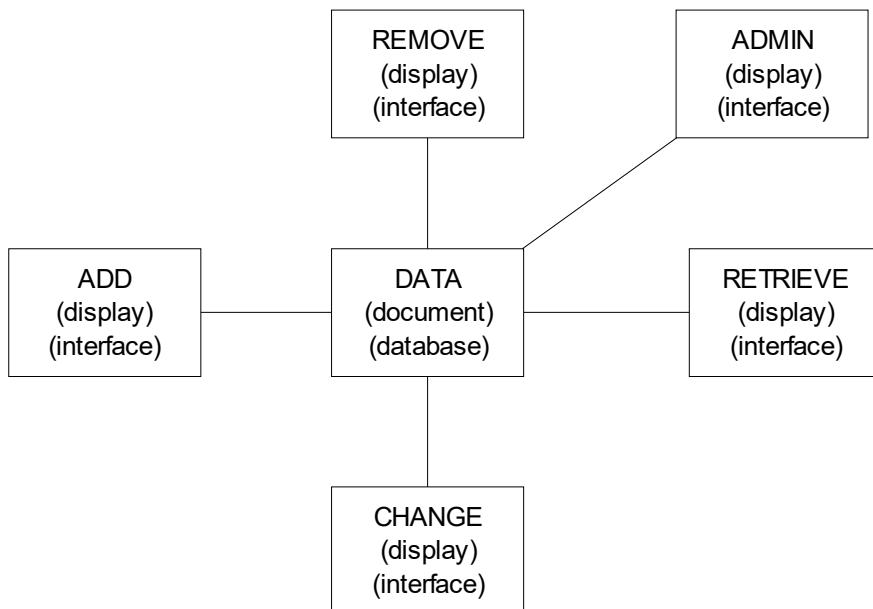

91

## 92 White box – Information technology solutions

93

94 In some cases (open or free software) information about programs and machinery can be accessed  
 95 by several stakeholders – i.e. white box.

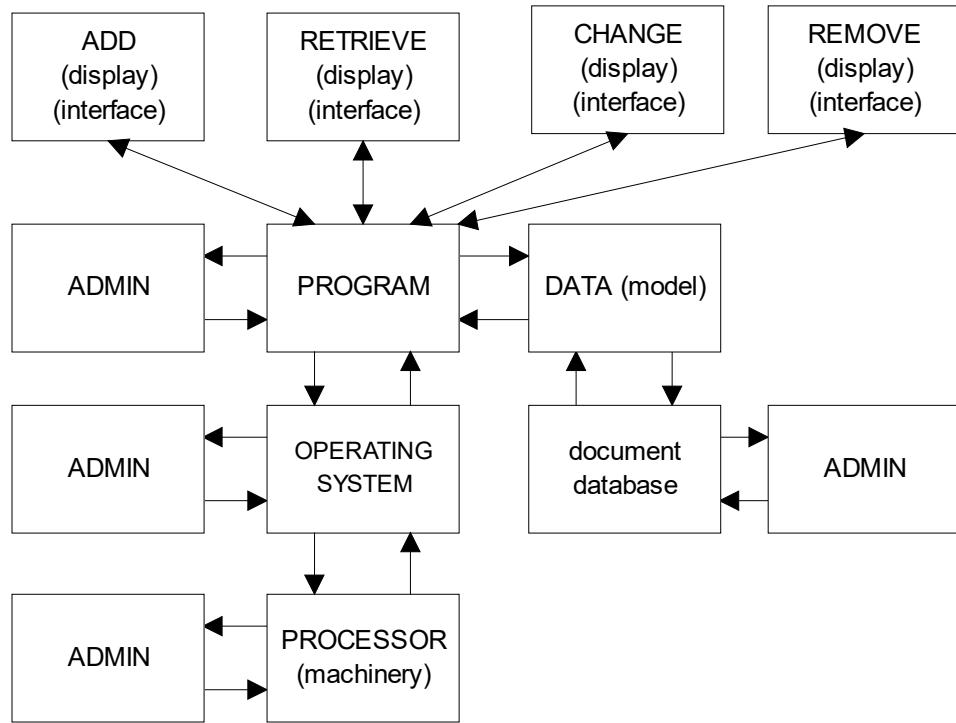

96

97

98 **Adding more details for information technology solutions**

99

100

101

102 All information technology solutions have also processor(s) (machinery), operating system(s) and  
 103 program(s). Processor(s) (machinery), operating system(s) and program(s) all need administration  
 104 for keeping a system up-to-date. All programs handle data in some format and data can be  
 105 database(s) and/or document(s).

106

107 **Owner, member, agreement, standards, openness and closeness**

108

109 Here we can note the difference between owners, agreements and members. In reality ownerships  
 110 agreements and memberships cause very complex networks, and those networks are changing all  
 111 the time: divisions, mergers, ownership changes, agreement changes, cooperation with other  
 112 entities, life-cycles, etc.

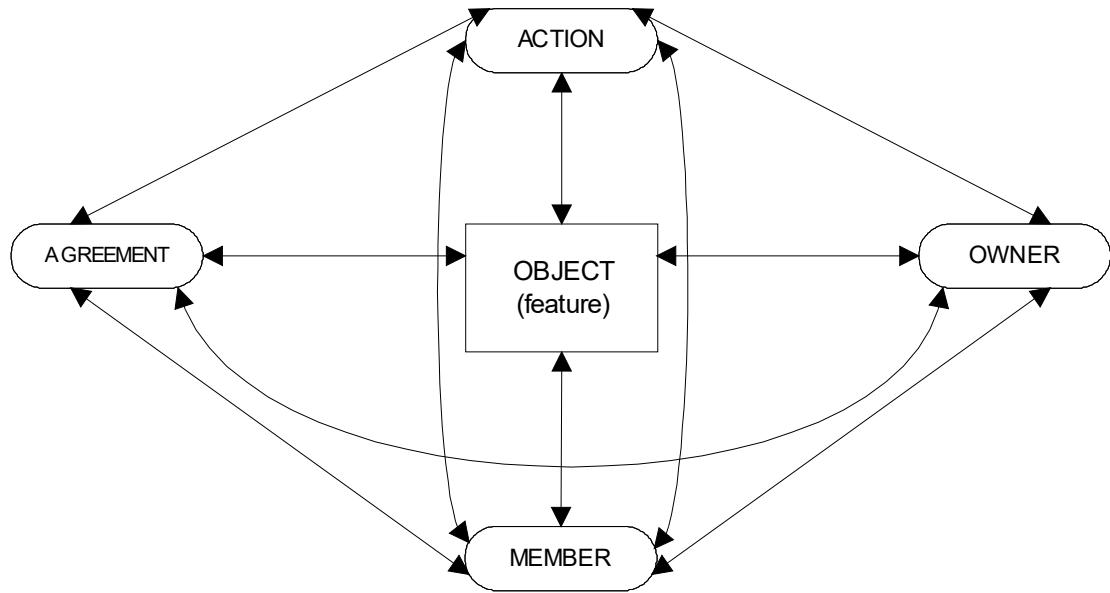

113

114 Here we can note that ownership, agreement and membership are interlinked in different ways.  
 115 Generally speaking average usage of a system means an unique combination of ownership,  
 116 agreement and membership. When everything works fine there are not problems. However changes  
 117 with ownership, agreement and membership can result difficult situations.

118

119 All previously mentioned issues can be based on ownership, membership and agreements. There  
 120 can be also different standards, which can be open or closed.

121

122  
123  
124  
125  
126  
127

**Note: The relations between different aspects of information systems can result rather complicated (legal) network(s): i.e. Ownership, Membership, Agreement.**

Based on previous presentations it is possible to present following table.

|   | <b>Owner?<br/>Member?<br/>Agreement?</b> | <b>Standards?</b> | <b>OPEN</b> | <b>CLOSED</b> |
|---|--|-------------------|-------------|---------------|
| <b>1. Device / Machinery</b>              |  |                   |             |               |
| <b>2. Operating system</b>                |  |                   |             |               |
| <b>3. Program(s)</b>                      |  |                   |             |               |
| <b>4. Data models / Conceptual models</b> |  |                   |             |               |
| <b>5. Documents</b>                       |  |                   |             |               |
| <b>6. Databases</b>                       |  |                   |             |               |
| <b>7. Communications</b>                  |  |                   |             |               |
| <b>8. Retrieve / Interface / Display</b>  |  |                   |             |               |
| <b>9. Add / Interface / Display</b>       |  |                   |             |               |
| <b>10. Remove / Interface / Display</b>   |  |                   |             |               |
| <b>11. Change / Interface / Display</b>   |  |                   |             |               |

128  
129

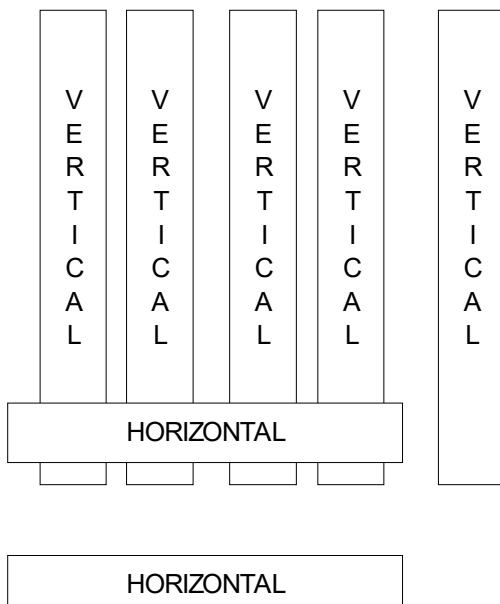

130

**PART 2: SOME NOTICES FOR NEW COMPETITION TOOL**

132

**Standards / horizontal and vertical standards**

134

135

136

137 There are differences between horizontal and vertical standards. A simple example is naturally  
138 email solutions. There are several vertical standards when creating technically email solutions. Then  
139 there are horizontal standards which enable sending messages between technically different email  
140 solutions.

141

142 Horizontal standards enables technological solutions which can work together. Horizontal standards  
143 hides different complexities in information systems.

144

**Proposal: There could be separation of horizontal standards and vertical standards.**

145

146 Personally I have advocated using different horizontal standards.

147

148 Here we can note some problems:

149

- 150 • some systems are based on **de-facto** standards
- 151 • some systems are based on **de-jure** standards
- 152 • there can be confrontations between **de-facto** and **de-jure** standards
- 153 • there can be a monopoly situation in some domain
- 154 • some standards may inhibit possible actions of some stakeholders
- 155 • there can be a standard war on some domains
- 156 • standards have different life-cycles

- 158       • systems have different life-cycles  
159       • there can be mismatches between different life-cycles  
160       • there can be failed standards  
161       • there can be deprecated standards.  
162

163 It is quite normal situation in the information technology field that there are competing standards  
164 for some application field. Therefore there are all the time ongoing “standards wars” or “format  
165 wars”. The information technology standards tend to be interrelated and one “standards war” or  
166 “format war” can lead to another similar situation.

167 I have advocated open standards even though in some cases open standards are not de facto  
168 standards. In practice public sector has very important role, when some standards are competing in  
169 the market place. Because public sector has a considerable power when buying/developing  
170 information systems and therefore public sector can sometimes direct markets to certain standards.  
171 Therefore there should be serious vigilance when assessing different standards and “standards” in  
172 some application fields.  
173

174       **Proposal: New competition tool could assess (1) *vertical* information technology  
175           solutions.**

176       **Proposal: New competition tool could assess (2) *horizontal* information technology  
177           solutions.**

178 Depending on the situation on different application fields there can be both *vertical* information  
179 technology solutions and *horizontal* information technology solutions.  
180

181       **Proposal: New competition tool could assess (3) *vertical* standards.**  
182

183       **Proposal: New competition tool could assess (4) *horizontal* standards.**  
184

185 Depending on the situation on different application fields there can be both *vertical* standards and  
186 *horizontal* standards.  
187

188       **Proposal: New competition could assess especially the situation with (2) *horizontal*  
189           information technology solutions and (4) *horizontal* standards.**  
190

191       **Enforcing *horizontal* standards based on decisions by different competition authorities**  
192

193 One issue is enforcing *horizontal* standards based on decisions by different competition authorities  
194 like Directorate-General for Competition (European Commission).  
195

196       **Proposal: In some cases different competition authorities could enforce usage of  
197           *horizontal* standards.**  
198

199       **Enforcing *open horizontal* standards based on decisions by different competition authorities**  
200

203

204 One issue is enforcing ***open horizontal*** standards based on decisions by different competition  
205 authorities like Directorate-General for Competition (European Commission).

206

207 **Proposal: In some cases different competition authorities could enforce usage of *open***  
***horizontal* standards.**

209

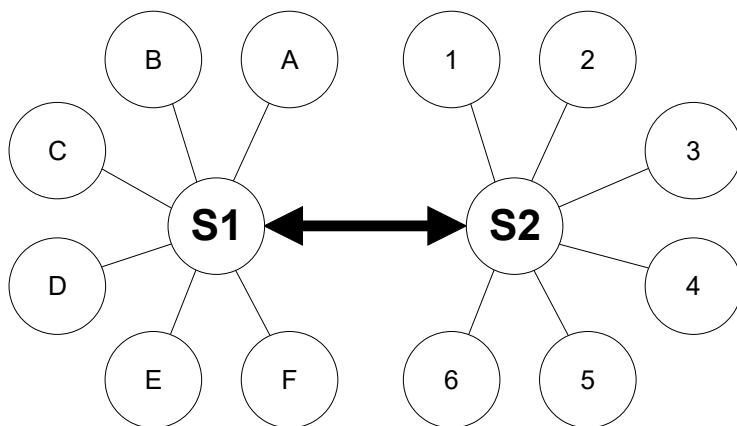

210 **Cooperation between different (mostly vertical) systems**

211

212 In reality cooperation between different information system is crucial. Different systems ( $S1 \leftrightarrow S2$ )  
213 can comply with different standards (e.g. A-F, 1-6). Cooperation between systems ( $S1 \leftrightarrow S2$ ) can be  
214 based on different standards.

215

## 1-2

216

217

218 Like mentioned before there can be several standards (closed/open/horizontal/vertical) for the same  
219 functions in different information systems.

220

221 As a summary it can be noted that especially ***horizontal*** and ***open horizontal*** standards are  
222 important for effective competition between different (mostly vertical) solutions.

223

224

225 **Good luck!!!**

226

227 This opinion is quite limited. Hopefully there are other constructive ideas presented in other  
228 opinions. This remains to be seen.
